New Fish Feeder Grows Bigger Fish...Faster

SAN ANTONIO, TX. Texas Hunter Products, a company known for making quality products for outdoor enthusiasts for over 50 years, has developed a new, highly efficient automatic fish feeder. Utilizing a high velocity air stream, the feeder projects feed pellets up to 45 feet into the water with a broad 20 ft. wedge shaped pattern. It's an attractive, reliable product loaded with smart, innovative new features. "We have spent the last several years developing this incredible machine and have incorporated an attractive design with a number of built-in features that until now, have been unavailable to customers utilizing a supplemental feeding program to grow big fish" says Bob Brock, the company's president.

The supplemental feeding of fish in a recreational pond or lake can enhance the size of the perch, bream, sunfish and other forage fish that the trophy bass are after. Although bass will not readily consume the supplemental feed, they will benefit from the production of larger, healthier forage fish. "By utilizing an automatic fish feeder, customers add a consistent, daily addition to the food chain...and that leads to bigger, healthier trophy bass. A regular feed regimen can also improve catch rates by concentrating fish in feeding 'zones' at precise times" adds Brock.

"The secret to our fish feeder is the design and engineering," he says. The feeder was carefully engineered to simplify the feed flow process, eliminating the need for augers, shut off gates and other components that can malfunction and cause problems. The feeder has a larger capacity than comparable products and uses a dual motor system with a built-in funnel that delivers a consistent, metered flow of feed into the powerful centrifugal air blower system. The EZ Set Digital Timer - a Texas Hunter exclusive - carries a 5-year limited warranty and feeds up to 9 times per day. The timer synchronizes the two motors, turning off the feed flow while the blower unit is still running, cleaning-out the system until the next scheduled feed cycle.

Two built-in feed level sight gauges make it easy to check the feed level from a distance, and the optional solar panel (highly recommended) may be mounted on any of the feeder's four sides - maximizing the exposure to the sun. Customers choose between Adjustable Legs, for mounting on a sloping pond bank, or Straight Legs, which reduce the feeder's footprint when mounted on the edge of a dock or pier.

Texas Hunter Products has built a reputation in the industry for delivering tough, long-lasting products that meet the real-life needs of outdoor enthusiasts since 1953. For a free color catalog visit www.TexasHunterProducts.com or call toll free (800) 969-3337.
