Texas Hunter Products makes feeding deer protein easy and affordable

SAN ANTONIO, TX. Texas Hunter Products, a San Antonio based company known for making quality products for outdoor enthusiasts for over 50 years, has developed and patented a new feeder that makes feeding protein pellets easy and cost effective. “It’s one of the simplest and most affordable ways to accelerate antler growth in deer populations”, says Bob Brock the company’s president. The feeder features a patented two-part funnel system that doesn’t require any moving parts, but always keeps the high-protein food fresh. The design provides deer with clean, dry supplemental feed - on demand.

The manufacturing process utilizes a robot with a plasma cutter to make precise cuts for the three feeding ports in a new, powder-coated 55-gallon barrel. “It’s important to get a good fit for the rain guards that are installed around the feed ports,” says Brock. “These rain guards help prevent water from getting to the feed and ensure that the feed remains dry and fresh” says Brock. Also included are heavy-duty legs with large welded footpads and 24-inch stabilizing stakes used to anchor the feeder to the ground.

It’s a nice package that’s affordably priced. The feeder will dispense corn, protein pellets - just about anything you put in there. Since the majority of people who feed deer are filling their feeders from 50lb bags purchased at their local feed store, Texas Hunter designed the unit so it’s less than 6 feet tall for easy filling. Once the feed is added, it is evenly distributed to three feeding ports by a unique, patented funnel system that allows just the right amount of feed to reach each feed port.

Texas Hunter makes expanding a protein-feeding program easy and affordable by reaching more deer with the same amount of feed. By strategically placing multiple feeders throughout a wildlife environment more deer can be fed and attracted to the area and the feed is distributed more efficiently than when using a single large capacity feeder.

“It’s easy for the customer to fill, it’s easy for the deer to eat and the feed remains dry and fresh,” says Brock. “Those three things coupled with a quality protein feed are the key ingredients to accelerating the antler growth of a deer population”, says Brock.

Texas Hunter Products has built a reputation in the industry for delivering tough, long-lasting products that meet the real-life needs of outdoor enthusiasts since 1954. For a free color catalog visit www.TexasHunterProducts.com or call toll free (800) 969-3337.
