

RF100 ROAD FEEDER Assembly Instructions

Step 1 Attach V-shaped Feed Deflector Plate to the bottom of the hitch bracket before mounting feeder to bracket. Use the two short bolts.
Note: Nutserts are installed in the bracket for your convenience.

Step 2 Attach the 2" Receiver Hitch Mounting Bracket to the back of the feeder by lining-up the bracket and inserting the two red wires with connectors through the round hole in the back of the feeder. Secure the bracket in place using the four longer bolts.

Step 3 Stand the feeder upright on the feed deflector plate and hitch bracket, open the lid and remove the cover from the remote compartment.

You may connect the power source in two ways:

- A) **Vehicle trailer plug connection:** match the two wires that were inserted through the hole in the back of the feeder, with the same color wires and plugs inside the remote compartment. Once the feeder is installed on the vehicle (Step 4 below), connect the feeder to the vehicle's trailer plug. Note: you must turn on the vehicle's parking / headlights to power the feeder.
- B) **Rechargeable battery connection:** **CAUTION: Do not connect the two wires that were inserted through the back of the feeder to the rechargeable battery.** Install a 12-volt rechargeable battery in the battery holder provided on the right side of the compartment and secure the battery using the Velcro strap. Then connect the red wire with the flat battery connector to the red (positive) terminal on the battery, and the dark brown wire to the black (negative) terminal on the battery.

Step 4 Slide the feeder's mounting bracket into the vehicle's 2" receiver receptacle and secure the mounting bracket with a heavy-duty hitch pin (not included) through the hole in the mounting bracket.

Step 5 Press the large button on the wireless remote control key chain to activate feeder. (Note: The remote transmitter is packed inside the remote / battery compartment inside the feeder.)
